Introducing TM Forum: The global association for digital business

TM Forum is the member-led global industry association transforming business agility through expert-led collaboration and co-innovation. A neutral, not-for-profit, we have 30 years of experience in accelerating transformation led by the world's foremost service providers.

"Without knowing the trends of global players, we cannot work efficiently. Without interaction with global players, there is no progress."

Takashi Kato,
VICE PRESIDENT, **NTT Group**

NTT

125,000+
Member professionals

Global presence

800+
Member companies

10/10 OF THE WORLD'S LARGEST CSPs ARE ACTIVE TM FORUM MEMBERS

AT&T · vodafone · 中国移动 China Mobile · 中国电信 China Telecom · T · NTT · orange · SoftBank · Telefónica · verizon

The connectivity industry's global alliance

TM Forum is a global alliance of over 800 communication service providers, Banks, Utilities, OSS/BSS & GIS vendors, Azure, Google, AWS, consultancies and system integrators, including the world's top ten Telcos

Led by Members

2,000+
professionals in our projects

20+
C-suite leaders on our Boards

800+
Member companies

110
countries where we're active

Valued by Members

1 million
Open API downloads

1,000
ODA assets in use

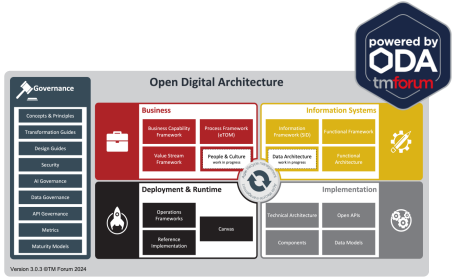

30,000+
Member professionals upskilled

110,000+
active Member professionals

“Powered by ODA” from Foundations to Action

ODA is the Foundation

ODA is the foundation and beating heart to everything we do

- Governance
- Business Architecture
- Information Systems
- Deployment and Runtime

How to apply ODA

ODA assets provide the foundations to support CSPs drive new solutions by

- Simplify your design
- Modernize your build
- Automate your operations

Composable IT & Ecosystems

Autonomous Networks

AI & Data Innovation

Missions (Powered by ODA)

Creating new holistic solutions that uses ODA assets as the foundation to deliver:

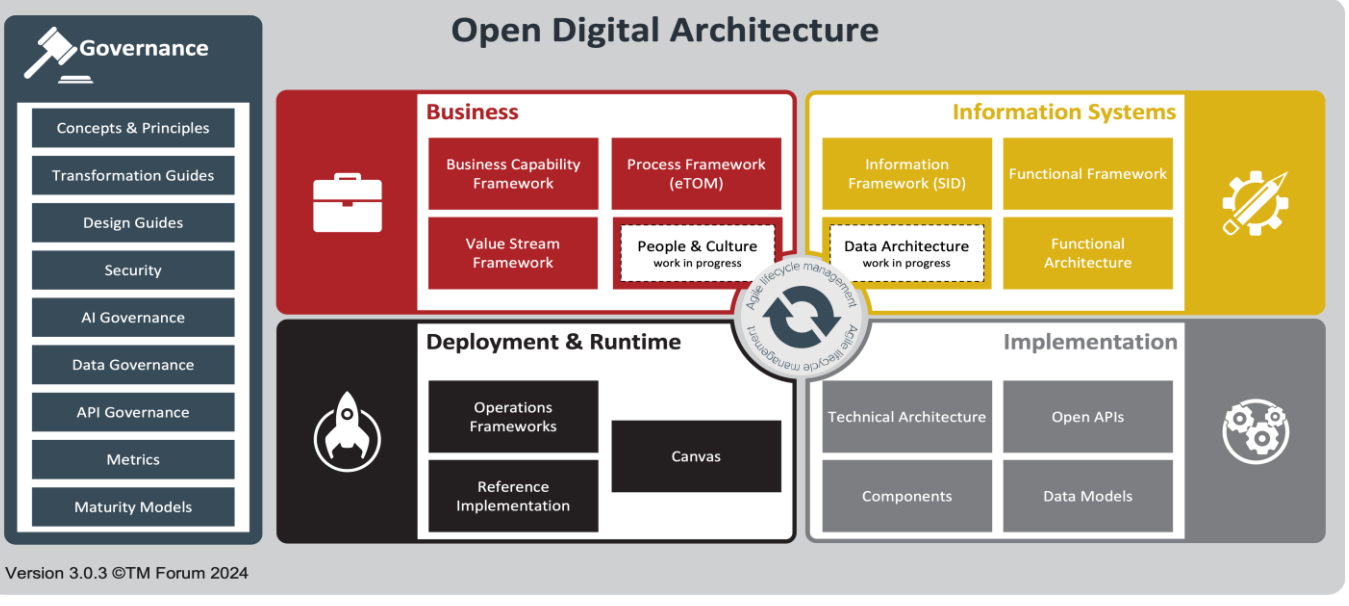

- Composable IT and Ecosystems
- Autonomous Network Operations
- AI and Data innovation

Open Digital Architecture (ODA) provides the Foundation

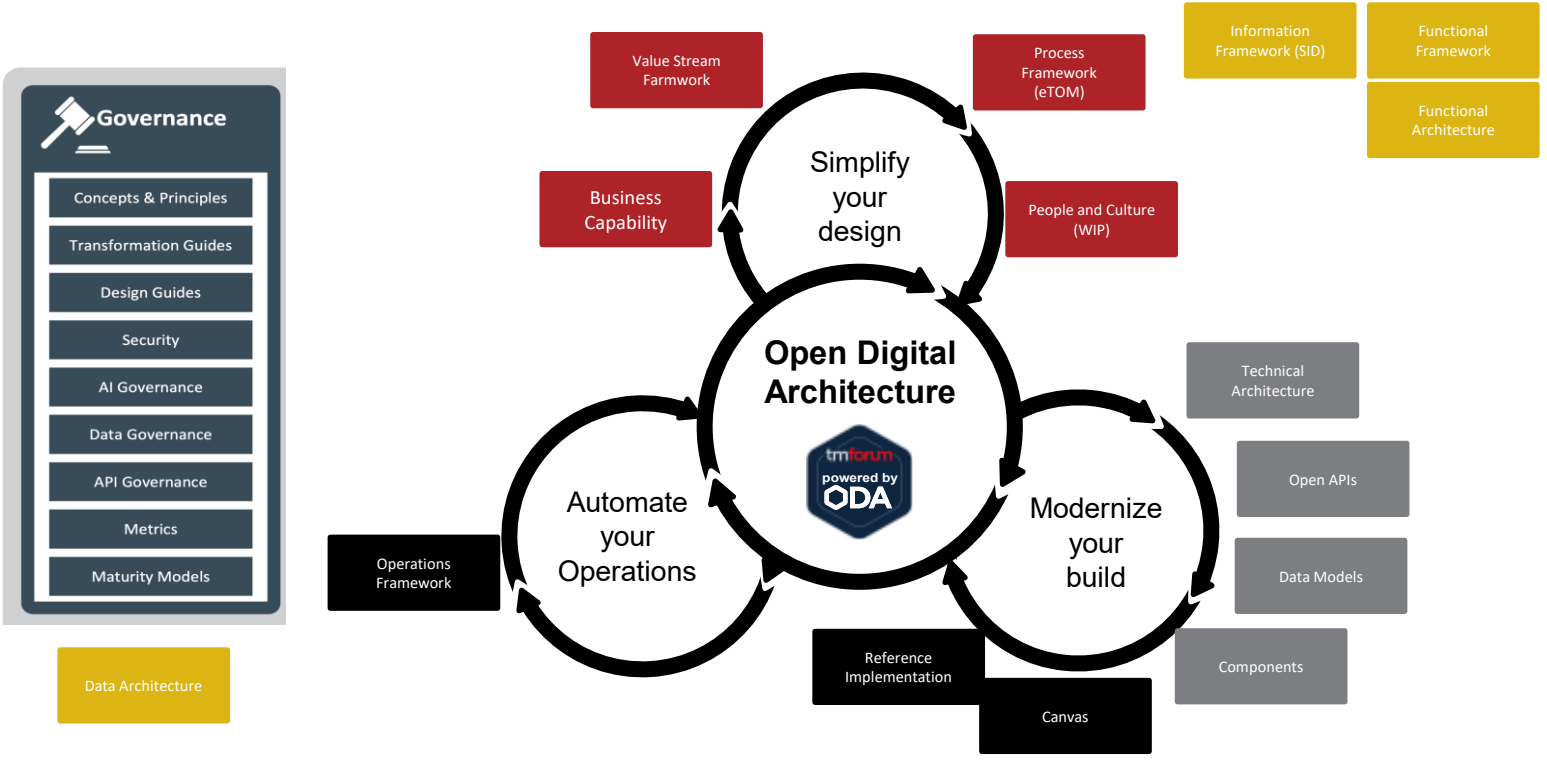

The updated **Open Digital Architecture** now incorporates some of the key assets of Open Digital Framework (ODF) to create one foundational suite of tools, frameworks, guides and toolkits. ODA is the foundation for any company to implement their key changes within their organization.

What is ODA:

Open Digital Architecture

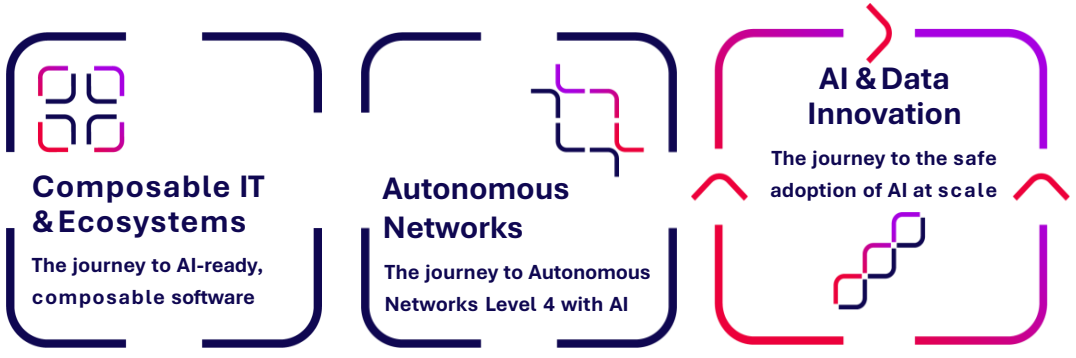

Create Mission through Design, Build and Operate

ODA is the foundation that supports our missions

Missions are **solutions** that solve a business problem that are designed, built and operated using ODA at its foundation

AI and Agentic AI makes transformation even more complex

Defining the AI-native CSP: Composable, Autonomous, Trusted

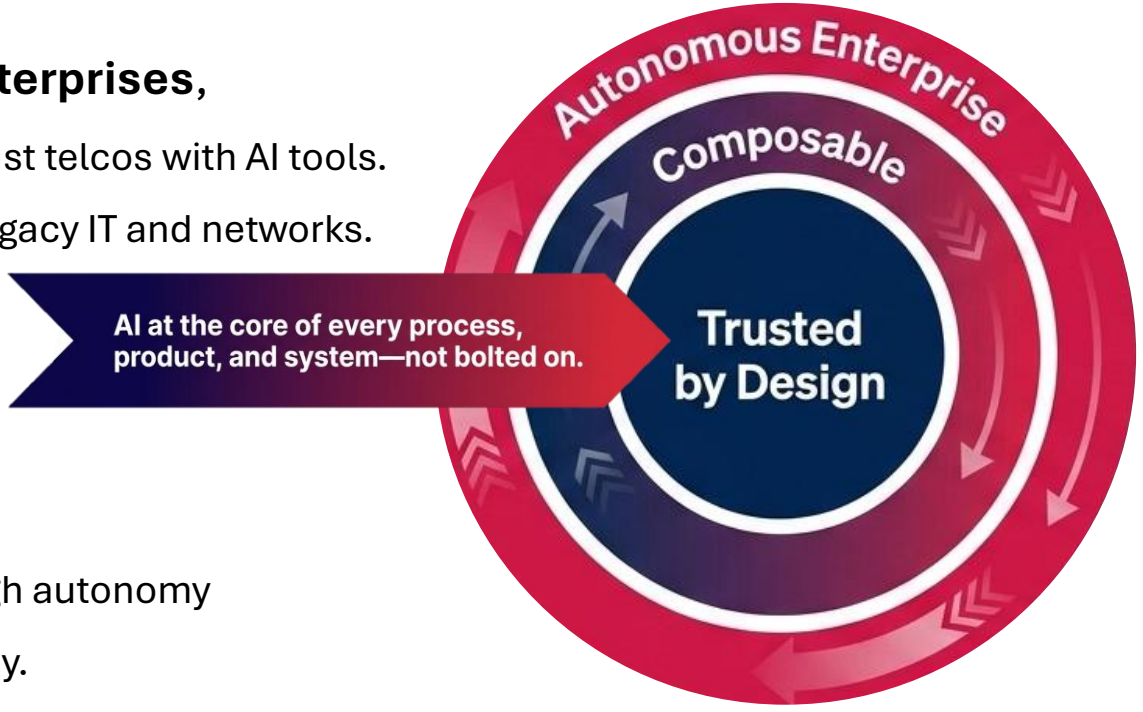

Race to 2030, leading CSPs need to be

AI-native Autonomous Enterprises,

not just telcos with AI tools.

We can't get there by just bolting AI onto legacy IT and networks.

That just automates the old world.

To become truly autonomous, we must:

- Reinvent IT through composability,
- Make the network self-governing through autonomy
- Ensure AI decision making is trustworthy.

The Race to 2030

What?

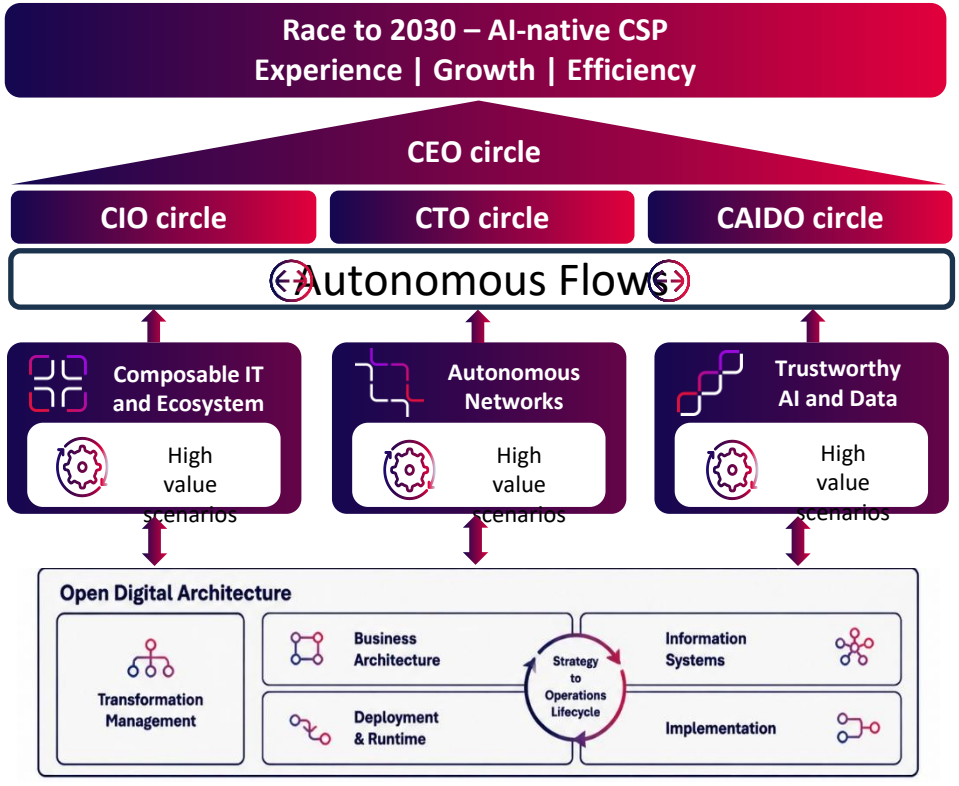

- 2030 is the timescale for the AI Native Telco
- The Missions help the industry get there
- E2E autonomous flow solve business problems by combining HVS's, all based on ODA foundation

So What?

- ODA is now for AI transformation of IT & Networks
- Existing ODA underpin all Missions
- AI-native ODA provides the essential foundation to scale

What Next?

- Building AI-native ODA – the roadmap from architecture to open digital autonomy
- Accelerate from Automation to Autonomy at scale
- Create the "playbook" to show members how to transform their networks

Composable IT and Ecosystem Mission: CIO world

- **What:**

  Product and customer-facing IT, partner ecosystems, and B2B/B2X propositions.

- **So what:**

  We need to Reinvent IT to make it modular and composable so CSPs can quickly assemble new offers and work with many partners.

- **Now what:**

  Use **high-value scenarios** include customer inquiry handling, order-to-activation flows, and digital channels to drive a composable IT stack

Autonomous Networks Mission: CTO world

- **What:**

  Designing, building, and operating an autonomous end-to-end network to make CPSs become Autonomous Enterprises

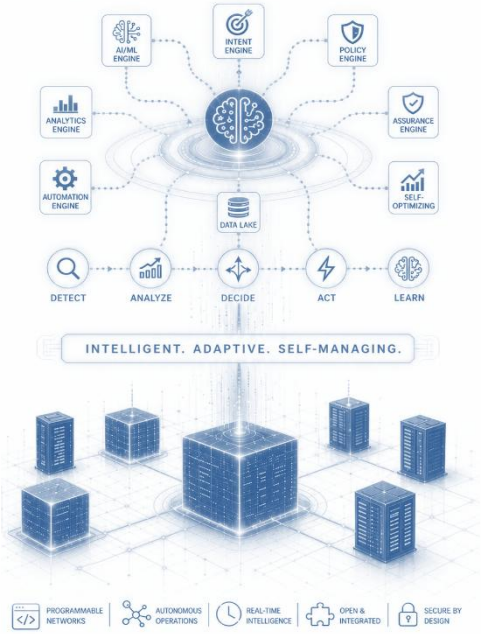

- **So what:**

  Need to create self-configuring, self-optimizing, self-healing networks using Agentic AI to deliver autonomy throughout the organization

- **Now what:**

  Use our **high-value scenarios** such as radio fault management, energy optimization, and dynamic slice management to drive towards L4+ autonomy

Autonomous Enterprise

Trustworthy AI and Data Mission: CAIDO world

- **What**:

  CSPs need a safety rail that lets them scale AI and agents everywhere in OSS, BSS and the network without losing control, evidence or trust

- **So what**

  CSPs are in a race to 2030 where they must industrialise AI while satisfying sovereignty and risk-based regulation, yet today most can only “trust” their AI based on gut feel.

- **Now what**:

  Use AI& Data high value scenarios and AI-native Blueprint, to build and test them so that every agent you deploy is trustworthy by design, not by accident.

Autonomous Flows:

TM Forum missions come together to solve E2E business challenges

BUSINESS INTENT

20 cameras, arena location, event time, guaranteed uplink quality.

1 COMPOSABLE IT & ECOSYSTEMS

- Intent Capture
- Product / Service Catalog
- Partner Ecosystem

2 AUTONOMOUS NETWORKS

- Network Slice
- Provisioning
- Assurance
- End-to-End Configuration

3 TRUSTWORTHY AI & DATA

- AI Monitoring
- SLA Optimization
- Anomaly Detection
- Governance & Compliance
- Auto-Remediation

OUTCOME

LIVE BROADCAST WITH GUARANTEED PERFORMANCE

5G

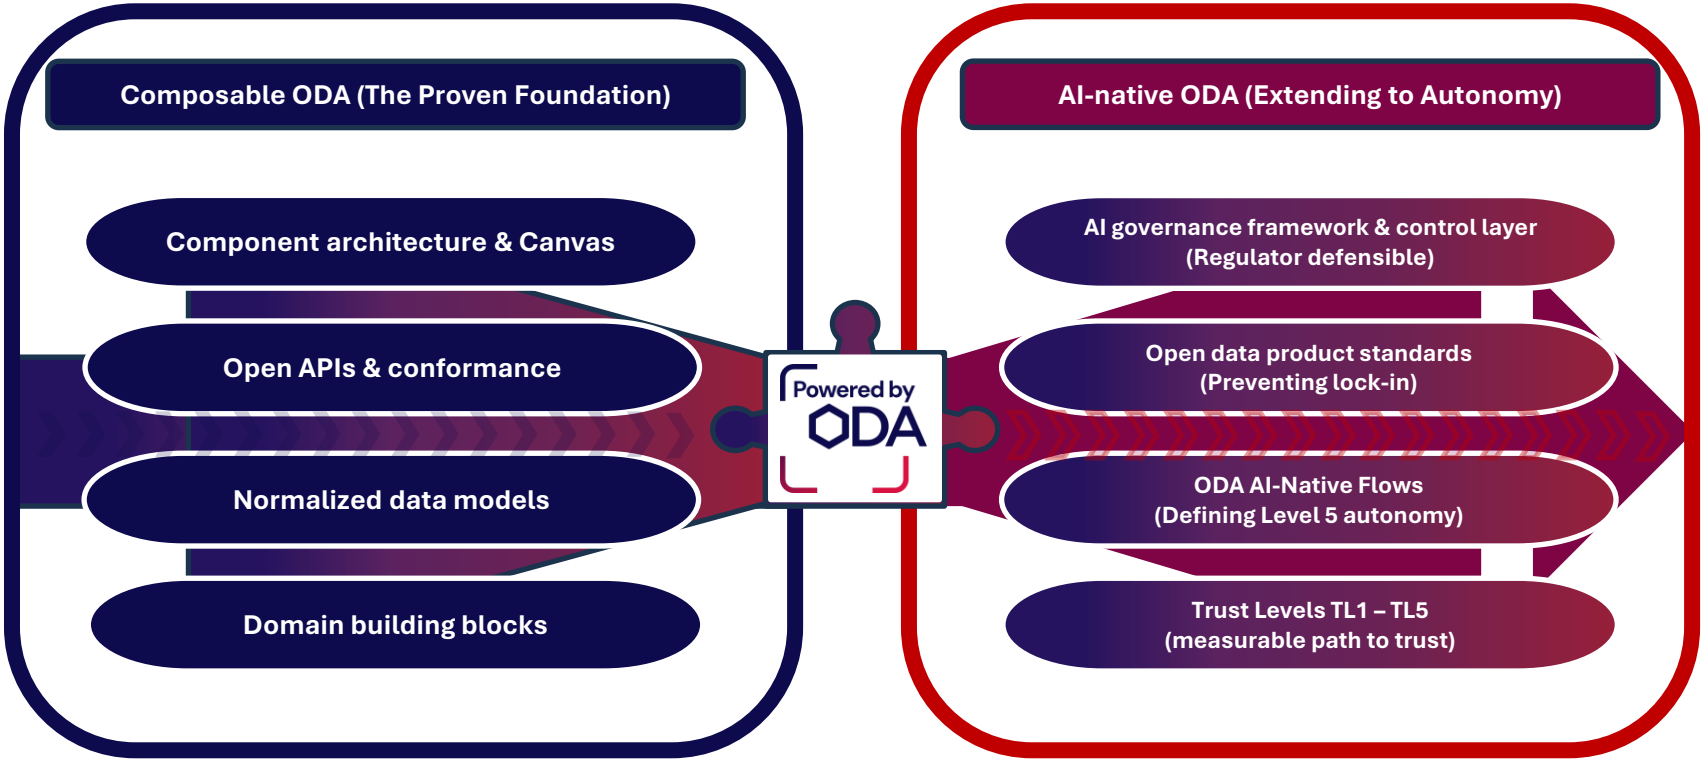

GUARANTEED UPLINK QUALITY
HIGH RELIABILITY • LOW LATENCY

Autonomous flow across business, service and network layers

All three missions collaborate

AI-Native ODA: From Architecture to Autonomy

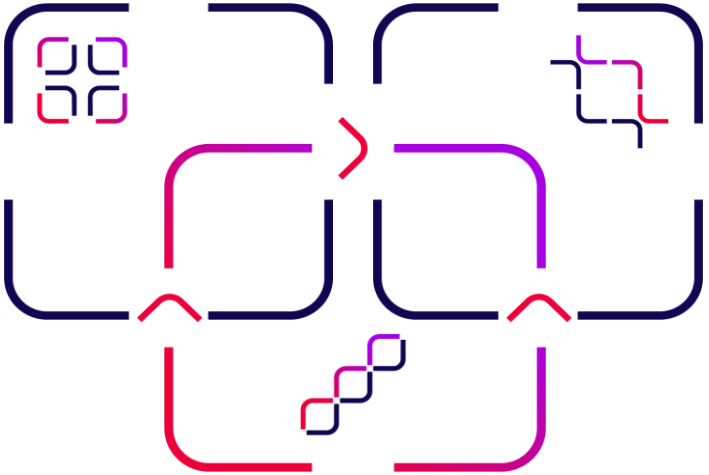

Evolving from assets that describe the what, to assets that deliver the how

Our Members are on a journey towards AI-enabled efficiency and agility through Industry Missions

Composable IT & Ecosystems

The journey to AI-ready, composable software

Autonomous Networks

The journey to Autonomous Networks Level 4 with AI

AI & Data Innovation

The journey to the safe adoption of AI at scale

Each produces **Mission solution**s that help leaders and practitioners address core business challenges

Becoming AI-Native – What is the right balance?

What's the business driver	Productivity	Growth	Scale
How do I deploy AI into the organization	AI for Sales AI for Networks AI for Operations AI for HR AI for Security		
What is the right tech balance	Human + Gen AI	AI Agent	Agentic AI

© 2025 TM Forum

How do we stop implementing technology silos within the organization?

© 2025 TM Forum

Being AI-Native requires clear foundations through AI4X to drive productivity, growth and scale

AI Leadership	**Productivity**	**Growth**	**Scale**
AI for Everyone (AI4X)	**AI for Sales**	**AI for Networks**	**AI for Operations**
	AI for HR	**AI for Security**	
AI-First Technology Enablers	**What is required is an AI-First, AI-Ready Open Digital Architecture**
